Subject: RE: Bachman Services Fire [State Soil/Water Samples]

Jhana,

We split samples with Bachman Services on Friday, August 10th.
We collected 1 sample in the upper containment area and 1 sample in the lower containment area of the tributary to the OK River.
We also collected a sample just North of the final containment area in the Oklahoma River.
All samples that we collected were water samples and will be analyzed for:
8260
8270
COD
Metals
And Ammonia.

I hope to have results by late Wednesday, and have been told that the Ammonia samples were all less than .1ppm which is good news.

Mark,

Please confirm what samples ODEQ took and how many [water/soil], what date and methods [8270, 8260 - is this all?]

Also, not sure how long it is going to take our water folks to come up with an answer so may not have one until Wed - FYI...

Thanks.
